Section: 07 24 19—Water-Drainage Exterior Insulation and Finish Systems

REPORT HOLDER:

STO CORPORATION

EVALUATION SUBJECT:
STO RAINSCREEN AND STO RAINSCREEN II CLASS PB EXTERIOR INSULATION AND FINISH SYSTEMS WITH DRAINAGE

1.0 EVALUATION SCOPE
Compliance with the following codes:
- 2018, 2015 and 2012 International Residential Code® (IRC)

For evaluation for compliance with codes adopted by Los Angeles Department of Building and Safety (LADBS), see ESR-1030 LABC and LARC Supplement.

2.0 USES
The Sto RainScreen and RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage comply with 2018 IBC Section 1407 (2015 and 2012 IBC Section 1408) and IRC Section R703.9 as EIFS with drainage.

Sto RainScreen and RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage may be installed in buildings of any construction type under the IBC (Types I through V) and dwelling under the IRC when installed in accordance with the applicable sections of Section 4.0.

3.0 DESCRIPTION

3.1 System Components:
Sto RainScreen and RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage consist of a water-resistant barrier, mechanically attached grooved or flat insulation board, reinforcing mesh, base coat, and finish coat. See Table 1 for system components.

3.2 Insulation Board:
The insulation boards must be one of the following:
- Expanded polystyrene (EPS) complying with ASTM C578, Type I, and ASTM E2430, produced by a molder with a current ICC-ES evaluation report.
- EPS insulation board produced by a molder who participates in an approved third-party quality-assurance program. EPS must comply with ASTM C578, Type I, and ASTM E2430.
- Sto Insulation Board, EPS complying with ASTM C578, Type I, and ASTM E2430.

EPS insulation boards must have a flame spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84 or UL 723.

3.3 Substrates:
Substrates must be one of the following:
- Glass mat faced gypsum recognized in a current evaluation report as complying with ASTM C1177.
- Gypsum sheathing complying with ASTM C1396.
- Plywood, Exposure 1 exterior grade complying with PS-1.
- Oriented Strand Board (OSB), Exposure 1, complying with PS-2.
- Concrete and masonry complying with the applicable code. Note: A tension load test program in accordance with Section 4.3.5 of AC235 must be implemented at the...
project specific locations and the results submitted to code official for approval.

3.4 Sealants: Sealants must comply with ASTM C920, Type S or M, minimum Grade NS, minimum Class 25 and Use O.

3.5 Water-resistive Barrier:
The barrier must be one of the following:
- No. 15 asphalt felt, complying with ASTM D226, Type I.
- Over wood-based sheathing, two layers of Grade D building paper or Type I building paper complying with ASTM E2556, or one layer of Grade D Building paper with 60 minute water-resistance or Type II building paper complying with ASTM E2556, as required by IBC Section 2510.6 or 2018 IRC Section R703.7.3 (2015 and 2012 IRC Section R703.6.3).
- Over wood-based and gypsum sheathing, StoGuard with Sto Gold Coat water-resistive coating, as recognized in ICC-ES evaluation report ESR-1233.
- Other water-resistive barriers are permitted, provided they have a current evaluation report.

3.6 Drainage:
Drainage must be provided between the insulation board and the water-resistive barrier by using one of the following:
- Drainage Insulation Boards are 1½ to 4 inches (38 to 102 mm) with grooves on the back side for drainage. The grooves must run the full width of the board and be 1 inch (25.4 mm) wide by ¼ inch (6.4 mm) deep, spaced 1½ inches (44 mm) on center.
- Drainage mat used with flat insulation boards must be either Ultra-Lath or galvanized expanded metal lath. Ultra-Lath, manufactured by Plastic Components, Inc., is a UV-stabilized, heavy-duty extended polyolefin (polyethylene or polypropylene), self-furred lath. Ultra-Lath has ½-inch-by-½-inch (6.4 mm by 6.4 mm) square holes oriented 45 degrees to the length of the lath, and is available either as a mat measuring 27 inches wide by 96 inches long (686 mm by 2438 mm) or as a roll measuring 27 inches wide by 100 feet long (686 mm by 30 480 mm). The galvanized, expanded metal lath is a self-furred diamond mesh, weighing a minimum of 2.5 pounds per square yard (0.95 kg/m²), and must comply with the applicable code.

4.0 DESIGN AND INSTALLATION

4.1 General:
Sto RainScreen and RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:
- Installation must comply with ESR-1233, this report, the manufacturer’s published installation instructions and this report, this report governs.
- The insulation board must be separated from the building interior by a thermal barrier complying with the applicable code.
- Termination of the systems must not be less than 6 inches (152 mm) above finished grade in accordance with 2018 and 2015 IBC Section 1705.16 (2012 IBC Section 1705.15). Refer to STO Corp. third-party inspection guidelines for verifying field preparation of materials.

5.0 CONDITIONS OF USE
The Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Installation must comply with this report, the manufacturer’s published installation instructions and the applicable code. In the event of a conflict between the manufacturer’s published instructions and this report, this report governs.

5.2 The insulation board must be separated from the building interior by a thermal barrier complying with the applicable code.

5.3 Installation must be by applicators listed by STO Corp.

5.4 Termination of the systems must not be less than 6 inches (152 mm) above finished grade in accordance with 2018 and 2015 IBC Section 1705.16 (2012 IBC Section 2603.9) and IRC Section R318.4.

6.0 EVIDENCE SUBMITTED

6.1 Data in accordance with ASTM E2568 and ASTM E2273.

6.2 Data in accordance with the ICC-ES Acceptance Criteria for EIFS Clad Drainage Wall Assemblies (AC235), dated January 2015 (Editorially revised April 2018), including NFPA 285 and NFPA 268 test reports for the systems presented in Table 4 of this report.

7.0 IDENTIFICATION

7.1 Containers of base coat, reinforcing mesh, and finish coat of the Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage described in this report must bear a label noting the manufacturer’s name (Sto Corp.) and address; product name; evaluation report number (ESR-1030); production date; batch number; quantity of material; storage, mixing and curing instructions; and expiration date.
The Windlock fasteners are packaged in cartons bearing the Windlock name; the designation Wind-Devil™, Wind-Devil 2™, ULP-3W2 or ULP-3S2; the quantity; and the installation instructions.

The weep screeds are packaged in cartons bearing the Plastic Components name and the part number (STDE).

Foam plastic insulation boards must be identified in accordance with their respective evaluation reports. When used on walls required to be of noncombustible construction, the EPS foam plastic boards must be identified along the edge of each board, and on both board faces of at least one board from each packaged bundle, with the following information:

- The Sto Corp. name and the evaluation report number (ESR-1030).
- The name and evaluation report number of the insulation board molder.
- The name of the inspection agency, as indicated in the evaluation report for the foam plastic.

7.2 The report holder’s contact information is the following:

For SI: 1 inch = 25.4 mm.

1All board joints backed by framing.

2Fasteners are No. 6 by 1½-inch-long (31.7 mm), buglehead drywall screws.

3Stud cavities at floor levels are blocked with mineral wool insulation, 4 lb/ft³ (64 kg/m³) density, 4 inches (102 mm) thick and 2 feet (610 mm) wide.

4All joints must be taped and treated with joint compound. Intermediate fastener heads are treated with joint compound in accordance with ASTM C840 or GA216.

5Openings must be framed with minimum 0.0478-inch-thick steel framing.

FIGURE 1—STO DRAINAGE INSULATION BOARD FASTENING DETAILS (RAINSCREEN)
DIVISION: 07 00 00—THERMAL AND MOISTURE PROTECTION
Section: 07 24 00—Exterior Insulation and Finish Systems
Section: 07 24 19—Water-Drainage Exterior Insulation and Finish System

REPORT HOLDER:
STO CORPORATION

EVALUATION SUBJECT:
STO RAINSCREEN AND STO RAINSCREEN II CLASS PB EXTERIOR INSULATION AND FINISH SYSTEMS WITH DRAINAGE

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage, described in ICC-ES evaluation report ESR-1030, have also been evaluated for compliance with the codes noted below as adopted by Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:
- 2017 City of Los Angeles Building Code (LABC)
- 2017 City of Los Angeles Residential Code (LARC)

2.0 CONCLUSIONS

The Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage, described in Sections 2.0 through 7.0 of the evaluation report ESR-1030, comply with the LABC Chapters 7, 14 and 26, and the LARC Sections R316 and R703, and are subject to the conditions of use described in this report.

3.0 CONDITIONS OF USE

The Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage described in this evaluation report must comply with all of the following conditions:

- All applicable sections in the evaluation report ESR-1030.
- The design, installation, conditions of use and identification of the Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage are in accordance with the 2015 International Building Code® (2015 IBC) provisions noted in the evaluation report ESR-1030.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- The Sto RainScreen and Sto RainScreen II Class PB Exterior Insulation and Finish Systems with Drainage have not been evaluated under LABC Chapter 7A or LARC Section R337 for use in the exterior design and construction of new buildings located in any Fire Hazard Severity Zone within State Responsibility Areas or any Wildland—Urban Interface Area.

This supplement expires concurrently with the evaluation report, reissued December 2019 and revised March 2020.
1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that Sto Rainscreen systems, recognized in ICC-ES evaluation report ESR-1030, have also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2017 Florida Building Code—Building
- 2017 Florida Building Code—Residential

2.0 CONCLUSIONS

The Sto Rainscreen systems, described in Sections 2.0 through 7.0 of the ICC-ES evaluation report ESR-1030, comply with the Florida Building Code—Building and the Florida Building Code—Residential, provided the design is in accordance with the Florida Building Code—Building and the Florida Building Code—Residential as applicable. The installation requirements noted in the ICC-ES evaluation report ESR-1030 for the 2015 International Building Code® meet the requirements of the Florida Building Code—Building and the Florida Building Code—Residential, as applicable, with the following conditions:

1. Installation must meet the requirements of Section 1403.8 of the Florida Building Code—Building or Section R318.7 of the Florida Building Code—Residential, as applicable.
2. Flashing must be in accordance with Section 1405.4 of the Florida Building Code—Building or Section R703.4 of the Florida Building Code—Residential, as applicable.
3. Water-resistive barrier must be in accordance with Section 1408.4.1.1 of the Florida Building Code—Building or Section R703.9.2, of the Florida Building Code—Residential, as applicable.
4. Installation of foam plastic must be in accordance with Section 2603.8 of the Florida Building Code—Building or Section R316.8 of the Florida Building Code—Residential, as applicable.

Use of the Sto Rainscreen systems for compliance with the High-Velocity Hurricane Zone provisions of the Florida Building Code—Building and the Florida Building Code—Residential has not been evaluated and is outside the scope of this evaluation report.

For products falling under Florida Rule 61G20-3, verification that the report holder’s quality assurance program is audited by a quality assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the evaluation report, reissued December 2019 and revised March 2020.
