DIVISION: 07 00 00—THERMAL AND MOISTURE PROTECTION  
Section: 07 24 00—Exterior Insulation and Finish Systems

REPORT HOLDER:  
DRYVIT SYSTEMS, INC.

EVALUATION SUBJECT:  
DRYVIT OUTSULATION® SYSTEM

1.0 EVALUATION SCOPE

Compliance with the following codes:
- 2013 Abu Dhabi International Building Code (ADIBC)†
  §The ADIBC is based on the 2009 IBC. 2009 IBC code sections referenced in this report are the same sections in the ADIBC.

For evaluation for compliance with codes adopted by Los Angeles Department of Building and Safety (LADBS), see ESR-1232 LABC and LARC Supplement.

2.0 USES

The Dryvit Outsulation system is an exterior insulation and finish system (EIFS) complying with the 2018 IBC Section 1407 (the 2015, 2012, and 2009 IBC Section 1408) and IRC Section R703.9. The system may be used in fire-resistance-rated construction and any construction Type (IBC Types I through V), with the exception of framed walls of Type V construction in an R1, R2, R3 or R4 Occupancy Group. Under the IRC, the system is limited to use on concrete or masonry walls.

3.0 DESCRIPTION

3.1 System Components:
See Table 1.

3.2 Insulation Board:
Insulation boards must be one of the following:

a. EPS Insulation Board, complying with ASTM C578, Type I, and ASTM E2430, produced by a molder with a current ICC-ES evaluation report, with a flame spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84 or UL723.

b. EPS insulation board may be produced by a molder that participates in an approved third-party quality assurance program. The board must comply with ASTM C578, Type I, and ASTM E2430, have a flame spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84 or UL723, and be labeled in accordance with the code.

c. Foam-Control EPS Boards, Type I - WSG, by AFM (ESR-1006).

d. EWG EIFS, by Falcon Foam (ESR-1962).

e. BASF Neopor® Type I Rigid Foam Insulation Boards (ESR-3463).

3.3 Substrates (see table 2):

- Gypsum sheathing complying with ASTM C1396 or ASTM C1177
- Fiber cement panels complying with the ICC-ES Acceptance Criteria for Fiber Cement Siding Used as Exterior Wall Siding (AC90), and ASTM C1186.
- Fiber cement panels complying with the ICC-ES Acceptance Criteria for Reinforced Cementitious Sheets Used as Wall and Ceiling Sheathing and Floor Underlayment (AC376), and ASTM C1325.
- Concrete-masonry complying with the code
- Concrete complying with the code
- Exterior plaster complying with the code
• Exposure 1 wood structural panels complying with DOC PS-1 or PS-2
• Brick masonry complying with the code

3.4 Sealants:
Sealants must comply with ASTM C920, Type S or M, minimum Grade NS, minimum Class 25 and Use O.

4.0 DESIGN AND INSTALLATION

4.1 General:
The Dryvit Outsulation System must be installed in accordance with the manufacturer’s application instructions, specifications and installation details. These are available at:

4.2 Drainage:
The Dryvit Outsulation System has not been qualified as an EIFS with drainage, as described in the 2018 IBC Section 1407.4.1 (2015, 2012 and 2009 IBC Section 1408.4.1) and IRC Section R703.9.2.

4.3 Wind Design:
Table 3 describes specific assemblies for which test data has been submitted. Other assemblies may be considered for approval by local officials based on testing and/or calculations by a registered design professional.

4.4 Weather Protection:
The Dryvit Outsulation System complies with the 2018 IBC Section 1404.2 (2015, 2012, and 2009 IBC Section 1403.2) and IRC Section R703.1.1.

4.5 Use in Types I through IV Construction:
Table 4 describes the assemblies qualified for use in Types I through IV construction.

4.6 Fire-resistance-rated Construction: See Table 5:
Table 5 describes the assemblies qualified for use in load-bearing and nonload-bearing-fire resistance-rated construction. In addition, in Type V construction, the Dryvit Outsulation System may be attached to the surface of combustible exterior fire-resistance-rated assemblies described in the 2018, 2015 and 2012 IBC Table 721.1(2) (2009 IBC Table 720.1(2)) without changing the assigned hourly rating of the assembly. The exterior wall must have a minimum 10-foot (3048 mm) separation distance from adjacent construction.

4.7 Special Inspection:
For recognition under the IBC, special inspections must be conducted in accordance with Sections 704.2 and 1705.16.1 of the 2018 and 2015 IBC, Sections 1704.2 and 1705.15.1 of the 2012 IBC and Sections 1704.1 and 1704.14 of the 2009 IBC. Refer to the Dryvit Systems, Inc., Third Party Inspection Guidelines for Owners and General Contractors/Construction Managers:

5.0 CONDITIONS OF USE
The Dryvit Outsulation System described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Installation must comply with this report, the manufacturer’s published application instructions, installation details and the applicable code. In the event of a conflict between the manufacturers published installation instructions and this report, this report governs.

5.2 The insulation boards must be separated from the building interior by a thermal barrier complying with the applicable code.

5.3 Use in framed walls of Type V construction in Occupancy Groups R1, R2, R3 and R4 is not permitted. Under the IRC, construction is limited to concrete and concrete masonry construction.

5.4 Installation must be by a contractor listed by Dryvit Systems, Inc.

5.5 Termination of the system must not be less than 6 inches (152 mm) above finished grade in accordance with IBC Section 2603.8 and 2018 and 2015 IRC Section R318.4 and R703.9.1(5) (2012 and 2009 IRC Section R318.4).

6.0 EVIDENCE SUBMITTED

6.1 Reports of tests in accordance with ASTM E2568.

6.3 Data in accordance with the ICC-ES Acceptance Criteria for Foam Plastic Insulation (AC12), dated June 2015 (Editorially revised October 2017).

6.4 Reports of tests in accordance with NFPA 285 and NFPA 268.

7.0 IDENTIFICATION

7.1 Each container or package of the coating or reinforcing mesh used as part of the Outsulation System must be labeled with the Dryvit Systems, Inc., name and address; the product name; lot or batch number; quantity of material; storage instructions; pot life; expiration date; and the evaluation report number (ESR-1232).

Foam plastic insulation must be labeled in accordance with the current ICC-ES evaluation report in which it is recognized, or as described in Section 3.2.

<sup>3</sup>Rated from both sides.

<sup>4</sup>On exterior walls, the exterior side sheathing must be gypsum sheathing complying with ASTM C1396.

<sup>5</sup>Design stress reduced to 78 percent of the adjusted F<sub>r</sub> and have a slenderness ratio of l<sub>w</sub>/d of 33.
DIVISION: 07 00 00—THERMAL AND MOISTURE PROTECTION
Section: 07 24 00—Exterior Insulation and Finish Systems

REPORT HOLDER:
DRYVIT SYSTEMS, INC.

EVALUATION SUBJECT:
DRYVIT OUTSULATION® SYSTEM

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that Dryvit Outsulation® System, described in ICC-ES evaluation report ESR-1232, has also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:
- 2020 City of Los Angeles Building Code (LABC)
- 2020 City of Los Angeles Residential Code (LARC)

2.0 CONCLUSIONS

The Dryvit Outsulation® System, described in Sections 2.0 through 7.0 of the evaluation report ESR-1232, complies with the LABC Chapters 7, 14 and 26, and the LARC Sections R316 and R703, and is subjected to the conditions of use described in this supplement.

3.0 CONDITIONS OF USE

The Dryvit Outsulation® System described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report ESR-1232.
- The design, installation, conditions of use and identification of the Dryvit Outsulation® System are in accordance with the 2018 International Building Code® (IBC) provisions noted in the evaluation report ESR-1232.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- The Dryvit Outsulation® System has not been evaluated under LABC Chapter 7A or LARC Section R337 for use in the exterior design and construction of new buildings located in any Fire Hazard Severity Zone within State Responsibility Areas or any Wildland—Urban Interface Area.

This supplement expires concurrently with the evaluation report, reissued January 2019 and revised May 2020.
1.0 REPORT PURPOSE AND SCOPE
Purpose:
The purpose of this evaluation report supplement is to indicate that the Dryvit Outsulation system, described in ICC-ES evaluation report ESR-1232, has also been evaluated for compliance with the code(s) noted below.

Applicable code edition(s):
- 2019 California Building Code (CBC)
For evaluation of applicable chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) and Division of State Architect (DSA), see Sections 2.1.1 and 2.1.2 below.
- 2019 California Residential Code (CRC)

2.0 CONCLUSIONS
2.1 CBC:
The Dryvit Outsulation system, described in Sections 2.0 through 7.0 of the evaluation report ESR-1232, complies with CBC Chapters 7, 14 and 26, provided the design and installation are in accordance with the 2018 International Building Code® (IBC) provisions noted in the evaluation report and the additional requirements of CBC Chapters 16 and 17, as applicable.

The products have not been evaluated under Chapter 7A for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within State Responsibility Areas or any Wildland–Urban Interface Fire Area.

2.1.1 OSHPD:
The applicable OSHPD Sections of the CBC are beyond the scope of this supplement.

2.1.2 DSA:
The applicable DSA Sections of the CBC are beyond the scope of this supplement.

2.2 CRC:
The Dryvit Outsulation system, described in Sections 2.0 through 7.0 of the evaluation report ESR-1232, complies with CRC Chapters 3 and 7, provided the design and installation are in accordance with the 2018 International Residential Code® (IRC) provisions noted in the evaluation report.

The products have not been evaluated under CRC Section R337 for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within State Responsibility Areas or any Wildland–Urban Interface Fire Area.

The products described in this supplement have not been evaluated for compliance with the International Wildland–Urban Interface Code®.

This supplement expires concurrently with the evaluation report, reissued January 2019 and revised May 2020.
1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that Dryvit Outsulation® System, recognized in ICC-ES evaluation report ESR-1232, has also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2017 Florida Building Code—Building
- 2017 Florida Building Code—Residential

2.0 CONCLUSIONS

The Dryvit Outsulation® System, described in Sections 2.0 through 7.0 of the evaluation report ESR-1232, complies with the Florida Building Code—Building and Florida Building Code—Residential, provided the design and installation are in accordance with the 2015 International Building Code® provisions noted in the evaluation report under the following condition:

- Installation must meet the requirements of Section 1403.8 of the Florida Building Code—Building or Section R318.7 of the Florida Building Code—Residential, as applicable.

Use of the Dryvit Outsulation® System for compliance with the High-Velocity Hurricane Zone provisions of the Florida Building Code—Building and the Florida Building Code—Residential has not been evaluated and is outside the scope of this evaluation report.

For products falling under Florida Rule 9N-3, verification that the report holder’s quality-assurance program is audited by a quality-assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the evaluation report, reissued January 2019 and revised May 2020.
