EVALUATION SUBJECT:  
DRYVIT OUTSULATION® RMD SYSTEM AND OUTSULATION® SMD SYSTEM EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

1.0 EVALUATION SCOPE

Compliance with the following codes:
- 2013 Abu Dhabi International Building Code (ADIBC)†

†The ADIBC is based on the 2009 IBC. 2009 IBC code sections referenced in this report are the same sections in the ADIBC.

2.0 USES

The Dryvit Outsulation® RMD System and Outsulation® SMD System are adhesively or mechanically attached exterior insulation and finish systems (EIFS) complying with 2018 IBC Section 1407 (2015, 2012 and 2009 IBC Section 1408) and IRC Section R703.9. The systems comply as an EIFS with drainage in accordance with 2018 IBC Section 1407.4.1 (2015, 2012 and 2009 IBC Section 1408.4.1) and IRC Section R703.9.

The systems recognized in this report are limited to use in buildings of Type V construction under the IBC and dwellings under the IRC, when installed in accordance with Section 4.5 of this report.

3.0 DESCRIPTION

3.1 System Components:

The systems consist of a water-resistant barrier, drainage medium, expanded polystyrene or polyisocyanurate insulation, adhesives or fasteners, base coat, reinforcing mesh and finish. See Table 1.

3.2 Insulation Board:

Insulation boards for the Outsulation RMD System must be one of the following:
- Expanded polystyrene (EPS) insulation board complying with ASTM C578 Type I and ASTM E2430, with a flame spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84 or UL723. The board must be produced by a molder who participates in an approved third-party quality assurance program, and must be labeled in accordance with Section 7.0 of this report.
- Foam-Control EPS boards, Type I-WSG, by AFM, as recognized in ICC-ES evaluation report ESR-1006.

Insulation boards for the Outsulation SMD System must be Stucco Shield by Atlas Roofing Corporation, a rigid polyisocyanurate foam core insulation board, complying with ASTM C1289 as Type II, with glass-fiber facings. Stucco Shield is recognized in ICC-ES evaluation report ESR-1375.

3.3 Substrates:

Substrates must be one of the following:
- Gypsum sheathing board complying with ASTM C1396 or ASTM C1177, minimum thickness of 1/2 inch (12.7 mm). When used as part of a fire-resistive-rated assembly, the gypsum sheathing must be Type X with a minimum thickness of 5/8 inch (15.9 mm).
- Unglazed brick or concrete masonry complying with the code.
- Concrete complying with the code.
4.0 INSTALLATION

4.1 General:
The Dryvit Outsulation® RMD System must be installed in accordance with 2018 IBC Section 1407 (2015, 2012 and 2009 IBC Section 1408), IRC Section R703.9 and the manufacturer’s application instructions, specifications and details. These are available at http://www.dryvit.com/media/341499/ds143.pdf.

The Dryvit Outsulation® SMD System must be installed in accordance with 2018 IBC Section 1407 (2015, 2012 and 2009 IBC Section 1408), IRC Section R703.9 and the manufacturer’s application instructions, specifications and details. These are available at http://www.dryvit.com/media/435393/ds123.pdf.

4.2 Drainage:
Drainage must be provided as noted in Table 1.

4.3 Wind Design:
Table 2 presents specific assemblies for which test data has been submitted. Other assemblies may be considered for approval by local officials based on testing and/or calculations of a qualified design professional.

4.4 Weather Protection:
The Outsulation® RMD and Outsulation® SMD systems comply with 2018 IBC Section 1402.2 (2015, 2012 and 2009 IBC Section 1403.2) and IRC Section R703.1.1.

4.5 Fire-resistance-rated Construction Assemblies:
In Type V construction, the Dryvit Outsulation® RMD and Outsulation® SMD systems may be attached to the surface of combustible exterior fire-resistance-rated assemblies described in 2018, 2015 and 2012 IBC Table 721.1(2) (2009 IBC Table 720.1(2)) without changing the assigned hourly rating of the assembly. The exterior wall must have a minimum 10-foot (3048 mm) separation distance from adjacent construction.

4.6 Special Inspection:
For recognition under the IBC, special inspection of the Dryvit Backstop NT-Texture or Dryvit Backstop NT-Textured drainage medium, the Tyvek StuccoWrap is also the water-resistive barrier.

5.0 CONDITIONS OF USE

The Dryvit Outsulation® RMD and Outsulation® SMD systems described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Installation must comply with this report, the manufacturer’s published application instructions and the applicable code. In the event of a conflict between the manufacturer’s instructions and this report, this report governs.

5.2 The insulation boards must be separated from the building interior by a thermal barrier complying with the applicable code.

5.3 Installation must be by applicators acceptable to Dryvit Systems, Inc.

5.4 Termination of the systems must not be less than 6 inches (152 mm) above finished grade, in accordance with 2018, 2015 and 2009 IBC Section 2603.8 (2012 IBC Section 2603.9) and IRC Section R318.4 and 2018 and 2015 IRC Section R703.9.2 (2012 and 2009 IRC Section R703.9.4.1).

5.5 Adequacy of fasteners for concrete, masonry, brick or portland cement plaster substrates must be demonstrated to the satisfaction of the code official by a program of proof-load testing of fastener withdrawal from the wall. The average withdrawal strength, in pounds, must be six times the required fastener load.

6.0 EVIDENCE SUBMITTED

6.1 Reports of tests in accordance with ASTM E2568 and ASTM E2273.

6.2 Data in accordance with the ICC-ES Acceptance Criteria for EIFS Clad Drainage Wall Assemblies.
(AC235), dated January 2015 (editorially revised April 2018).

6.3 Data in accordance with the ICC-ES Acceptance Criteria for Foam Plastic Insulation (AC12), dated June 2015 (editorially revised October 2017).

7.0 IDENTIFICATION

7.1 Each container or package of coating or reinforcing mesh used as part of the Dryvit Outsulation® RMD system and Outsulation® SMD system must be labeled with the Dryvit Systems, Inc., name and address; the product name; the lot or batch number; the quantity of material; the storage instructions; the pot life; the expiration date; and the evaluation report number (ESR-1547).

7.2 EPS insulation boards must be labeled with the manufacturer's name; manufacturing address or factory identification; and the current ICC-ES evaluation report number.

¹When DuPont Tyvek StuccoWrap is used as the water-resistive barrier, a drainage medium is not required.
²Adhesive attachment is permitted when system is installed over Dryvit Backstop NT.
³Water-resistant barrier conforming with a standard referenced in the code or recognized in a current ICC-ES evaluation report.
⁴Notched trowel adhesive, vertically applied, is used only when Dryvit Backstop NT is used as the water-resistive barrier.

For SI: 1 inch = 25.4 mm; 1 psf = 0.0479 kPa.

\(^1\)Minimum nominally 2\times4 wood framing, minimum specific gravity 0.43.

\(^2\)Maximum positive pressure is limited to the capacity of the framing and structural sheathing; or concrete, brick, concrete masonry or Portland cement plaster substrate, determined in accordance with the applicable code.

\(^3\)Framing members must be designed to resist all positive and negative transverse design loads with a maximum allowable deflection of 1/240 of the span.

\(^4\)Limited to the capacity of the studs, sheathing and fasteners.

\(^5\)Outsulation RMD System only.

\(^6\)Minimum No. 18 gage [0.0475 inch (1.119 mm) base-metal thickness].

\(^7\)Allowable loads are limited to wood structural panels.
1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that Dryvit Outsulation® RMD System and Outsulation® SMD System, recognized in ICC-ES master evaluation report ESR-1547, have also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2017 Florida Building Code—Building
- 2017 Florida Building Code—Residential

2.0 CONCLUSIONS

The Dryvit Outsulation® RMD System and Outsulation® SMD System, described in Sections 2.0 through 7.0 of the master evaluation report ESR-1547, comply with the Florida Building Code—Building and Florida Building Code—Residential, provided the design and installation are in accordance with the 2015 International Building Code® provisions noted in the master report under the following condition:

Installation must meet the requirements of Section 1403.8 of the Florida Building Code—Building or Section R318.7 of the Florida Building Code—Residential, as applicable.

Use of the Dryvit Outsulation® RMD System and Outsulation® SMD System for compliance with the High-Velocity Hurricane Zone provisions of the Florida Building Code—Building and the Florida Building Code—Residential has not been evaluated and is outside the scope of this evaluation report.

For products falling under Florida Rule 9N-3, verification that the report holder’s quality-assurance program is audited by a quality-assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the master report, reissued July 2018.
