2.0 USES
The Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system are exterior insulation and finish systems (EIFS) complying with IBC Section 1408 and IRC Section R703.9. The systems comply as an EIFS with drainage in accordance with IBC Section 1408.4.1 and IRC Section R703.9.

The systems may be used in fire-resistance-rated, Type V construction when installed in accordance with Section 4.5 of this report.

3.0 DESCRIPTION
3.1 System Components:
See Table 1.

3.2 Insulation Board:
Insulation boards must be one of the following:

a. Parex WaterMaster Insulation Board, LaHabra WaterMaster Insulation Board and El Rey WaterMaster Insulation Board, which are expanded polystyrene (EPS) complying with ASTM C578, Type I, and ASTM E2430. The boards are produced by a molder who participates in an approved third-party quality assurance program, and are labeled in accordance with Section 7.0 of this report. The boards include 1/4-inch-deep-by-11/2-inch-wide (3.2 mm by 38 mm) corrugations across their width.

b. Flat EPS insulation board from a molder with a current evaluation report showing conformance to ASTM C578, Type I, and ASTM E2430. The board must be labeled in accordance with the applicable report.

c. Flat EPS insulation board that complies with ASTM C578, Type I, and ASTM E2430. The board is produced by a molder who participates in an approved third-party quality assurance program, and is labeled in accordance with the applicable code.

3.3 Substrates:
- Gypsum sheathing complying with ASTM C1396 or ASTM C1177
- Fiber cement panels complying with ASTM C1186 and with the ICC-ES Acceptance Criteria for Fiber Cement Siding Used as Exterior Wall Siding (AC90)
- Fiber cement panels complying with ASTM C1325 and with the ICC-ES Acceptance Criteria for Reinforced Cementitious Sheets Used as Wall and Ceiling Sheathing and Floor Underlayment (AC376)
- Concrete-masonry complying with the code
- Concrete complying with the code
- Exposure 1 wood structural panels complying with DOC PS-1 or PS-2
- Brick masonry complying with the code

3.4 Water-resistive Barrier:
The barrier must be one of the following:

3.4.1 Parex, El Rey and LaHabra WaterMaster House Wrap 366: A kraft building paper that conforms to the Grade D requirements of AC38 and has a 60-minute water-resistance rating.

3.4.2 Building Paper: Building paper must comply with ASTM D226, Type I asphalt-saturated felt.
3.4.3 Tyvek StuccoWrap: Tyvek StuccoWrap as described in ICC-ES report ESR-2375.

3.5 Sealants:
Sealants must comply with ASTM C902, Type S or M, minimum Grade NS, minimum Class 25 and Use O.

4.0 DESIGN AND INSTALLATION
4.1 General:
Parex USA Systems must be installed in accordance with the manufacturer's installation instructions, specifications and details. These are available at www.parex.com.

4.2 Drainage Options:
- Parex WaterMaster Insulation Board, LaHabra WaterMaster Insulation Board and El Rey WaterMaster Insulation Board, installed over a water-resistive barrier as described in either Section 3.4.1 or 3.4.2
- Flat Insulation Board or WaterMaster Insulation Board, LaHabra WaterMaster Insulation Board and El Rey WaterMaster Insulation Board, installed over Tyvek StuccoWrap described in Section 3.4.3

4.3 Wind Design (See Table 2):
Table 2 presents specific assemblies for which test data has been submitted. Other assemblies may be considered for approval by code officials based on testing and/or calculations by a qualified design professional.

4.4 Weather Protection:
The Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system comply with IBC Section 1403.2 and IRC Section R703.1.1.

4.5 Fire-resistance-rated Construction:
In Type V construction, the Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system may be attached to the surface of combustible exterior fire-resistance-rated assemblies described in 2015 and 2012 IBC Table 721.1(2) [2009 IBC Table 720.1(2)] without changing the assigned hourly rating of the assembly. The exterior wall must have a minimum 10-foot (3048 mm) separation distance from adjacent construction.

5.0 CONDITIONS OF USE
The Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Installation must comply with this report, the manufacturer's published installation instructions and the applicable code. In the event of a conflict between the manufacturer's instructions and this report, this report governs.

5.2 The insulation board must be separated from the building interior by a thermal barrier complying with the applicable code.

5.3 Installation must be by applicators acceptable to Parex USA, Inc.

5.4 Termination of the systems must not be less than 6 inches (152 mm) above finished grade, in accordance with 2015 and 2009 IBC Section 2603.8 (2012 IBC Section 2603.9) and IRC Section R318.4.

5.5 Adequacy of fasteners for concrete, masonry, brick or portland cement plaster substrates must be demonstrated to the satisfaction of the code official by a proof-load test program consisting of fastener withdrawal from the wall. The average withdrawal strength, in pounds, must be six times the required fastener load.

6.0 EVIDENCE SUBMITTED
6.1 Reports of tests in accordance with ASTM E2568 and ASTM E2273.

6.2 Data in accordance with the ICC-ES Acceptance Criteria for EIFS Clad Drainage Wall Assemblies (AC235), dated January 2015.

6.3 Data in accordance with the ICC-ES Acceptance Criteria for Foam Plastic Insulation (AC12), dated June 2015.

6.4 Data in accordance with the ICC-ES Acceptance Criteria for Water-resistive Barriers (AC38), dated January 2015.

7.0 IDENTIFICATION
7.1 Each container or package of coating or reinforcing mesh used as part of the Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system must be labeled with the Parex USA, Inc., name and address; the product name; lot or batch number; quantity of material; storage instructions; pot life; expiration date; and the evaluation report number (ESR-1689).

Parex WaterMaster Insulation Boards, LaHabra WaterMaster Insulation Board and El Rey WaterMaster Insulation Board must be labeled on the edge of each board with the Parex USA, Inc., name, the plant identification number, and the evaluation report number (ESR-1689). Other foam plastic insulation must be labeled in accordance with the current ICC-ES evaluation report in which it is recognized, or must be labeled as noted in Section 3.2.

For SI: 1 inch = 25.4 mm; 1 psf = 0.0479 kPa.

\(^1\)Minimum 2x4 wood framing, minimum specific gravity 0.42

\(^2\)Maximum positive pressure is limited to the capacity of the framing and structural sheathing, or concrete, brick, masonry or Portland cement plaster substrate, determined in accordance with the applicable code.

\(^3\)Maximum positive pressure is limited to 55 psf (2.63 kPa) for gypsum sheathing complying with ASTM C1396, and is limited to 41 psf (1.96 kPa) for gypsum sheathing complying with ASTM C1177, or to the capacity of the framing, whichever is lower.

\(^4\)The framing members must be designed to resist all positive and negative transverse design loads with a maximum allowable deflection of 1/240 of the span.

\(^5\)Penetration into studs is not required for Pattern A.

EVALUATION SUBJECT:  
PAREX USA WATERMASTER LCR SYSTEM, LAHABRA WATERMASTER LCR AND EL REY WATERMASTER LCR SYSTEMS

1.0 REPORT PURPOSE AND SCOPE  
Purpose:  
The purpose of this evaluation report supplement is to indicate that the Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system, recognized in ICC-ES master report ESR-1689, have also been evaluated for compliance with the codes noted below.

Applicable code editions:  
- 2017 Florida Building Code—Building  
- 2017 Florida Building Code—Residential

2.0 CONCLUSIONS  
The Parex USA WaterMaster LCR system, Parex Standard WaterMaster system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system, described in Sections 2.0 through 7.0 of the master evaluation report ESR-1689, comply with the Florida Building Code—Building and the Florida Building Code—Residential, provided the design and installation are in accordance with the 2015 International Building Code® provisions noted in the master report and the following condition apply:

1. Design wind loads must be based on Section 1609 of the Florida Building Code—Building or Section R301.2.1 of the Florida Building Code—Residential, as applicable.

2. Installation must meet the requirements of Section 1403.8 of the Florida Building Code—Building or Section R318.7 of Florida Building Code—Residential, as applicable.

Use of the Parex USA WaterMaster LCR system, LaHabra WaterMaster LCR system and El Rey WaterMaster LCR system for compliance with the High-Velocity Hurricane Zone provisions of the Florida Building Code—Building and the Florida Building Code—Residential has not been evaluated, and is outside the scope of this evaluation report.

For products falling under Florida Rule 9N-3, verification that the report holder’s quality-assurance program is audited by a quality-assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the master report, reissued July 2018.
